

**IN THE CLAIMS:**

The text of all pending claims, (including withdrawn claims) is set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with underlining and deleted text with ~~strikethrough~~. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

Please AMEND claims 1-15 in accordance with the following:

1. (CURRENTLY AMENDED) A readable-by-computer recording medium recorded with a program read by a computer to manage data generated by a plurality of organizations on the basis of communication data transferred and received between said organizations, which executes:

inputting the communication data sent from a first organization to a second organization; ~~simulating recording first data generated by~~ a first intra-organization procedure executed in said first organization when sending the first communication data; and  
~~recording first data generated by the first intra-organization procedure,~~  
~~wherein the first data includes at least a contract term, an article price and an article~~  
~~comparing a content of second data with a content of the recorded first data, wherein the~~  
~~second data is generated by the first intra-organization procedure executed in said first~~  
~~organization when sending second communication data; and~~  
updating the recorded first data when the content of the second data is different from the  
content of the recorded first data.

2. (CURRENTLY AMENDED) A readable-by-computer recording medium recorded with a program read by a computer to manage data generated by a plurality of organizations on the basis of communication data transferred and received between said organizations, which executes:

inputting the communication data sent from a first organization to a second organization; detecting reply data to the communication data sent to said first organization from said second organization;  
~~simulating recording first data generated by~~ an intra-organization procedure executed in said second organization when sending the first communication data; and  
~~recording data generated by the intra-organization procedure,~~  
~~wherein the data includes at least a contract term, an article price and an article~~  
~~comparing a content of second data with a content of the recorded first data, wherein the~~  
~~second data is generated by the intra-organization procedure executed in said second~~

organization when sending second communication data; and  
updating the recorded first data when the content of the second data is different from the  
content of the recorded first data.

3. (CURRENTLY AMENDED) A readable-by-computer recording medium recorded with a program according to claim 1, wherein said computer further executes:

~~detecting reply data to the communication data sent to said first organization from said second organization;~~

~~simulating recording third data generated by a second intra-organization procedure~~  
executed in said second organization when sending the first communication data; and

~~recording second data generated by the second intra-organization procedure~~

~~comparing a content of fourth data with a content of the recorded third data,~~

wherein the fourth data is generated by the intra-organization procedure executed in  
said second organization when sending second communication data; and

updating the recorded third data when the content of the fourth data is different from the  
content of the recorded third data.

4. (CURRENTLY AMENDED) A readable-by-computer recording medium recorded with a program according to claim 3, wherein said computer further executes comparing the recorded first data with the second recorded third data, and detects difference data between the organizations.

5. (CURRENTLY AMENDED) A readable-by-computer recording medium recorded with a program according to claim 3, wherein said computer further executes coupling the recorded first data and the second recorded third data together, and tracks the procedures executed between the organizations.

6. (CURRENTLY AMENDED) An organization activity management method of managing data generated by a plurality of organizations on the basis of communication data transferred and received between said organizations, said method comprising:

~~inputting the communication data sent from a first organization to a second organization;~~

~~simulating recording first data generated by a first intra-organization procedure~~

~~executed in said first organization when sending the first communication data; and~~

~~recording first data generated by the first intra-organization procedure,~~

~~wherein the first data includes at least a contract term, an article price and an article~~

~~comparing a content of second data with a content of the recorded first data,~~

wherein the second data is generated by the first intra-organization procedure executed in said first organization when sending second communication data; and

updating the recorded first data when the content of the second data is different from the content of the recorded first data.

7. (CURRENTLY AMENDED) An organization activity management method of managing data generated by a plurality of organizations on the basis of communication data transferred and received between said organizations, said method comprising:

inputting the communication data sent from a first organization to a second organization;  
detecting reply data to the communication data sent to said first organization from said second organization;

simulating recording first data generated by an intra-organization procedure executed in said second organization when sending the first communication data; and  
recording data generated by the intra-organization procedure,  
wherein the data includes at least a contract term, an article price and an article  
comparing a content of second data with a content of the recorded first data, wherein the  
second data is generated by the intra-organization procedure executed in said second  
organization when sending second communication data; and

updating the recorded first data when the content of the second data is different from the content of the recorded first data.

8. (CURRENTLY AMENDED) An organization activity management method according to claim 6, further comprising:

detecting reply data to the communication data sent to said first organization from said second organization;

simulating recording third data generated by a second intra-organization procedure  
executed in said second organization when sending the first communication data; and

recording second data generated by the second intra-organization procedure  
comparing a content of fourth data with a content of the recorded third data,  
wherein the fourth data is generated by the intra-organization procedure executed in  
said second organization when sending second communication data; and

updating the recorded third data when the content of the fourth data is different from the content of the recorded third data.

9. (CURRENTLY AMENDED) An organization activity management method according to claim 8, further comprising comparing the recorded first data with the second

recorded third data, and detects wherein difference data between the organizations are detected.

10. (CURRENTLY AMENDED) An organization activity management method according to claim 8, further comprising coupling the recorded first data and the second recorded third data together, wherein and tracking the procedures executed between the organizations are tracked.

11. (CURRENTLY AMENDED) An information processing system managing data generated by a plurality of organizations on the basis of communication data transferred and received between said organizations, said system comprising:

a module inputting the communication data sent from a first organization to a second organization;

a module simulating recording first data generated by a first intra-organization procedure executed in said first organization when sending the first communication data; and

a module recording first data generated by the first intra-organization procedure,

wherein the first data includes at least a contract term, an article price and an article

a module comparing a content of second data with a content of the recorded first data,  
wherein the second data is generated by the first intra-organization procedure executed in said  
first organization when sending second communication data; and

a module updating the recorded first data when the content of the second data is  
different from the content of the recorded first data.

12. (CURRENTLY AMENDED) An information processing system managing data generated by a plurality of organizations on the basis of communication data transferred and received between said organizations, said system comprising:

module inputting the communication data sent from a first organization to a second organization;

a module detecting reply data to the communication data sent to said first organization from said second organization;

a module simulating recording first data generated by an intra-organization procedure executed in said second organization when sending the first communication data; and a module recording data generated by the intra-organization procedure,

wherein the data includes at least a contract term, an article price and an article

a module comparing a content of second data with a content of the recorded first data,  
wherein the second data is generated by the intra-organization procedure executed in said

second organization when sending second communication data; and  
a module updating the recorded first data when the content of the second data is  
different from the content of the recorded first data.

13. (CURRENTLY AMENDED) An information processing system according to claim 11, further comprising:

a module detecting reply data to the communication data sent to said first organization from said second organization;  
a module simulating recording third data generated by a second intra-organization procedure executed in said second organization when sending the first communication data; and  
a module recording second data generated by the second intra-organization procedure  
a module comparing a content of fourth data with a content of the recorded third data,  
wherein the fourth data is generated by the intra-organization procedure executed in said second organization when sending second communication data; and  
a module updating the recorded third data when the content of the fourth data is different from the content of the recorded third data.

14. (CURRENTLY AMENDED) An information processing system according to claim 13, further comprising a module comparing the recorded first data with the second recorded third data, wherein to detect difference data between the organizations are detected.

15. (CURRENTLY AMENDED) An information processing system according to claim 13, further comprising a module coupling the recorded first data and the second recorded third data together, and tracking wherein the procedures executed between the organizations are tracked.
